CLUTCH GUIDE TUBE

COMPLETE FUNCTIONALITY FOR MANUAL TRANSMISSION

Guide Tube oil seals have a very important function in a manual gearbox. Its roles are to avoid any leakage of oil from the gearbox to the clutch bell and to make the clutch bearing work properly and in a smooth way.

Guide Tube oil seals, in fact, incorporate the input gearbox shaft seal that avoid any passage of oil from the gearbox to the area where the clutch is operating, preserving its lifespan and functionality.

KEEP IT DRY

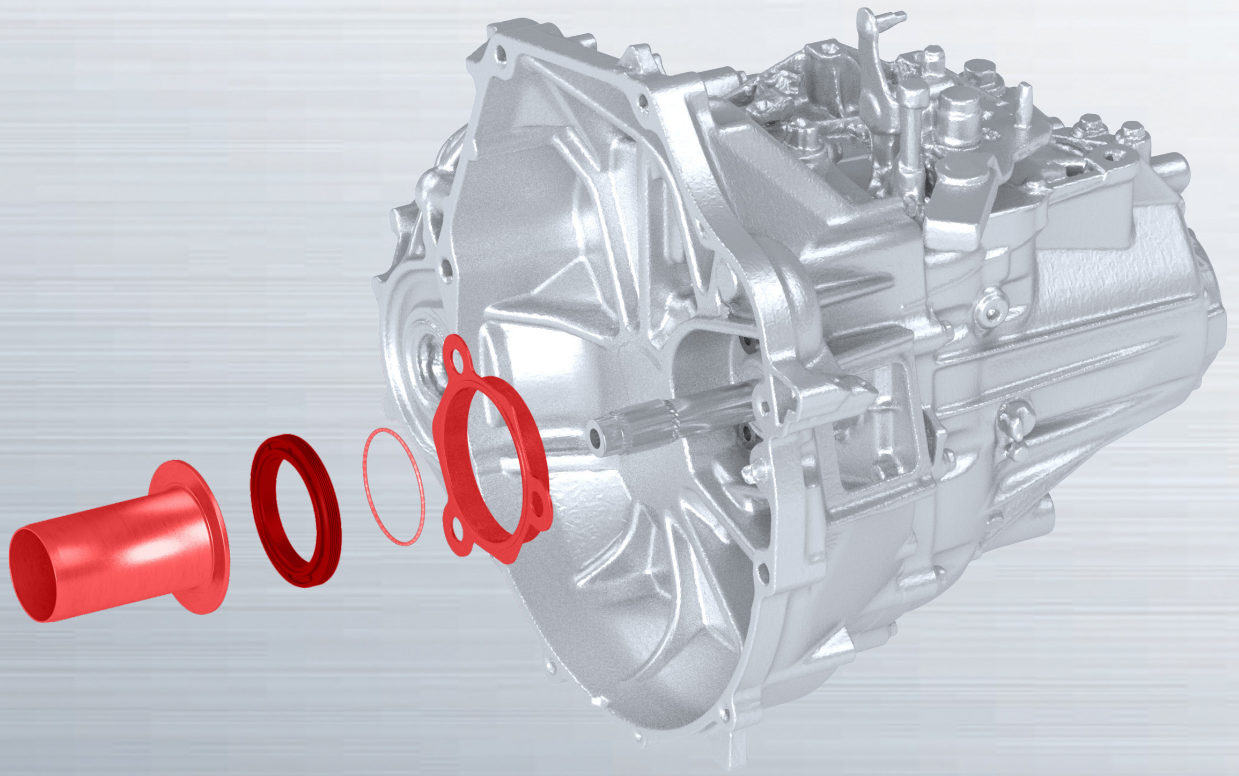

Clutch systems are known as a “dry” system and even the smallest leak of oil in the area might damage its capacity to transmit motion from the engine to the gearbox. Also, the metal part of the Guide Tube oil seal, is deputy to ensure the clutch bearing travel, granting it smooth axial movement that avoids many malfunctions related to vibration or travel of the clutch pedal.

Due to this, checking the conditions and changing the Guide Tube oil seal during the clutch maintenance is fundamental in order to avoid further damage. If traces of wear are appearing on the metal part of the Guide Tube, if a leakage appears in the clutch bell, then the Guide Tube oil seal needs to be changed.
