THE RIGHT CHOICE PULLEY 80001103

The OE pulley 80001103 is specially engineered for BMW high performance engines.

The main characteristics of this outstanding torsional vibration damper designed by the original manufacturer are

- ▶ the **viscous fluid** between the interior ring and the housing ensures excellent damping properties
- ▶ an integrated **heat shield** keeps high temperatures at bay, ultimately protecting against engine failure
- ▶ the innovative **rubber-to-metal bonding** is resistant to corrosion, reliable and resilient, making it ideal at isolating noise and vibration

Counterfeit parts or cheap replicas do not have these characteristics and are not in line with the high OE standards.

Don't take a risk – Choose Corteco original quality.

Original Pulley

Corteco pulley 80001103 with heatshield

Visco fluid

Heat shield

Rubber-to-metal bonding

Replica Pulley

No visco fluid

No heat shield

No rubber-to-metal bonding

Specific product design to fulfill OE requirements

High quality raw materials for high-level service parts

Efficient production processes

Global supply chain, dedicated to the aftermarket
