

# EVO300P PRESSURIZED CARTRIDGE

PROFESSIONAL SEALING PASTE  
MADE IN GERMANY

High quality, latest generation silicone, strengthened with a unique charging agent, increasing thermal resistance as well as a strong elasticity for improved durability in front of vibration, tensioning and tearing efforts. **QUALITY MADE IN GERMANY.**

Efficient Surface Energy (ESE): Formula optimized for a strong adhesion rate and perfect seal. This universal sealing compound with its new technology assures sealing of every type of surface or crack.

Product contains non-flammable gas. It does not contain any solvent or carcinogenic agent and is 100% conform with the latest health and safety legislation.

Drying time adapted for professional use. Easy application thanks to the Efficient Surface Energy (ESE) formula.

EVO300P counter display: 49392392  
Contains 10 pressurized cartridges 200ml

## PROPERTIES AND APPLICATIONS

EVO300P consists of 100% of the latest generation silicone, strengthened with filler agent. Providing stability and durability far superior to classic silicone.

Thermal resistance is increased by the filler agent, which allows EVO300P to function from -70°C to 250°C and up to 300°C at peak intervals. It is non-corrosive and has excellent adhesive properties without primer on both metallic and non-metallic materials. EVO300P easily adapts to uneven or irregular surfaces and has a very high resistance to coolants and chemicals. **The application is more user friendly thanks to the new formula. It facilitates extrusion, allows a precise application and has an optimized drying time for professional use.**

Examples: For automotive applications. Wherever extreme resistance to oil leaks and high temperature is required, in modern engines with steel, plastic or aluminium cases. Used by car manufacturers.
