THE INNER VALUES COUNT. QUALITY FOR SAFETY AND COMFORT.

STEERING AND SUSPENSION COMPONENTS WITH OEM QUALITY.

Corteco reinforces its vibration control product line with a complete steering & suspension range that covers over 90% of all European vehicles. The range consists of over 7,000 articles, including more than 3,000 Expert Kits and comprises the expertise of the leading Original Equipment Manufacturers.

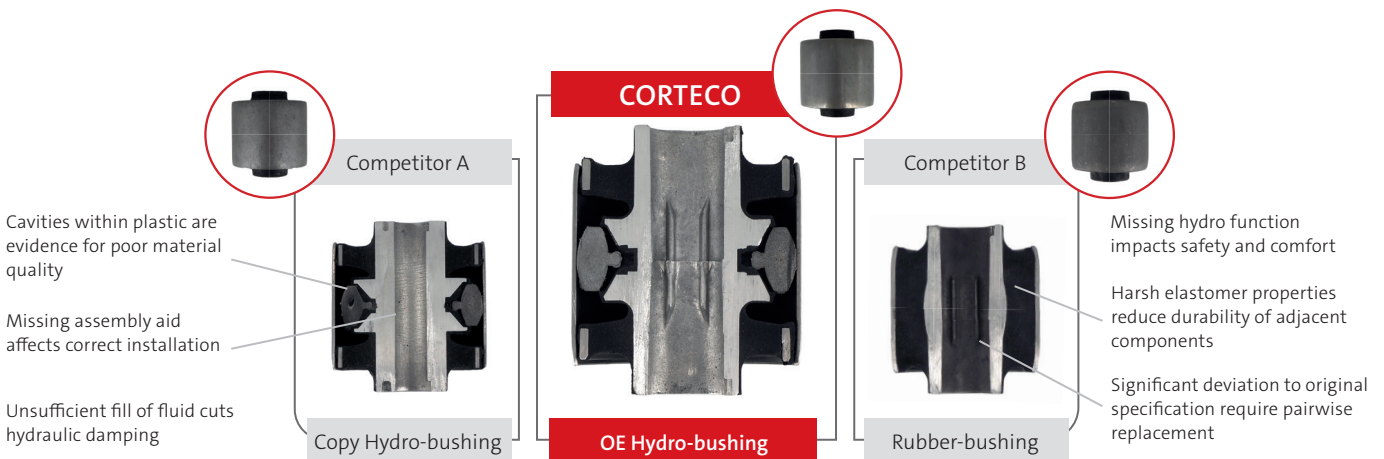

HYDRO-BUSHINGS

THE KEY PLAYER IN STEERING AND SUSPENSION

From the outside, bushings from various providers appear to be almost identical. An inside look presents major quality differences. Well-known manufactures for chassis bushings distribute pure rubber-bushings and copy hydro-bushings whereas Corteco hydro-bushings are that of OE quality.

THE CROSS SECTION REVEALS THE DIFFERENCE

- ▶ Pure Rubber design: Missing hydro technology negatively affects the functionality.
- ▶ Copy Hydro-bushings: Missing original specifications and comprise poor material quality.

Original Hydro-bushings guarantee as in a newly manufactured vehicle.

Vibracoustic

- ▶ driving safety
- ▶ driving comfort
- ▶ driving dynamics

THE BENEFIT OF OEM QUALITY

- ▶ Active vehicle value retention
- ▶ Proper functionality
- ▶ Durable rubber-to-metal bond
- ▶ Less stress on adjoining components
- ▶ Reduced repair times
- ▶ Continued safety and satisfied customers
